

Using Digital Document Cameras

User Guide (v1.0 - June 2008)

M. Bampton (mbampton@sd6.bc.ca)

Introduction

This guide will show you how to use the AverMedia Digital Document Camera.

1) Turn on the digital projector and the document camera.

2) Make sure the projector is set to use the document camera's input using the projector's **Source** selector (on the remote or on the projector itself).

3) Place the document camera on a flat surface which will accommodate both the camera and the document.

4) Manipulate the arm to position the camera over your document. You will see four red dots projected on to the work surface. These dots represent the limit of the camera's viewing area. Make sure the corners of your document are within the dots.

5) It is possible to zoom and auto focus using the controls on the document camera or on its remote.
